

Given the structured and consolidated data of dog and cat breeds, I want you to do the following:

1. Create a pivot chart for cat breeds and display the following:
 - a. Total count of cat breeds per fur type
 - b. Total count of cat breeds with and without “affectionate” temperament
 - c. Add a slicer based on lap cat column
2. Create a pivot charts for dog breeds and display the following:
 - a. Total count of dog breeds per Group 2
 - b. Total count of dogs with and without “affectionate” temperament
 - c. Add a slicer based on group 1 column
3. Add more slicers or filters based on your own analysis
